

All-Ceramic Crown Procedure

Can be completed in 2 steps in most cases

- Made using CAD-CAM technology at a dental laboratory
- Tooth Colored, No metal, All ceramic material that is extremely strong and very esthetic

FIRST APPOINTMENT (usually lasts about 2 hours):

- Local Anesthetic
- Cut remaining enamel off of broken/cracked tooth
- Make impression of tooth preparation
- Place temporary crown on tooth

SECOND APPOINTMENT (usually lasts about 1 hour):

- 3 to 4 weeks AFTER first appointment
- Local anesthetic (sometimes not necessary)
- Remove temporary crown
- Try-in and adjust permanent crown
- Cement permanent crown
